Keilor Park, Victoria, Australia 3042

A Class II Permissive Change is requested to add a new model to existing certification with FCC ID: X4K-KPX7201. There is a change to the software between models requiring the permissive change. A report to FCC part 15C subpart 15.231 is provided showing the new model complies with the applicable FCC requirements.

The differences between the KPX-7V2 (64bit) and the KPX-7V2 (128bit) are in the following:

- Changed encryption from 64-bit to 128-bit;
- Removed KeeLoq Code;
- Changed Power density spectrum causing a degradation in the 20 dB bandwidth;
- Added autocomplete circuit.

Sincerely,

Nikolai Klepikov
Electronics Design Engineer
